===== Open EDL is a handy, easy to use tool specially designed to offer you a simple nonlinear video editor, renderer and transcoder following the edit-decision-list concept. It is based on mplayer and mencoder. I had been user of mencoder's mencoder for the past years, and I found it to be a good tool for the job, especially if you need a light-weight and easy-to-use solution. But I needed a bit more control and features, so I decided to create my own tool using qt4 because it is very powerful and easy-to-use. The program is written using standard C++ principles and uses QT as its primary GUI framework. Open EDL main features are listed below: - simple to use nonlinear video editor (see previews) - easy-to-use transcoder - pipeline with QT designers for a cool and easy-to-use UI - format presets and script based custom transcoding (supported mplayer output with deinterlace, deinterlacing method selection for vcd and dvd players, dts/ac3/hdd/dts/aac/mka/mp3 audio output, hw/sw acceleration, theme manager and colors) - pipeline optimization - interface with FSB renderer - support for sample rates, framerates and bitrates - support for current status bar - preview window with cut and save/render buttons - ability to pass parameters using environment variables - automatic resolution selection - capability to pre-/post-process data - scaling support - movie and avi/mp4/wmv/mp3/ac3/dts/dtshd/flac/etc. file importer/exporter - ability to export raw data from sample-rate/framerate/bitrate constrained media - ability to display subtitles - ability to use any program to convert media - ability to use any mplayer setting - ability to use a.vcd/.dvd/.mkv/.avi/.mp3/.mp2/.wav/.aac/.ogg/.flac/.mka/flac/.m4a/aac/.ac3/.dts/.dtshd/.mp3h.2ch/.mp2t.2ch/.wav/.aac/.ac3/.flac/.mka/flac/.m
