WMI Delphi Code Creator is a small application designed to generate Object Pascal and C++ code to access the WMI (Windows Management Instrumentation) classes, events and methods. The application has a simple but powerful interface, consisting of a single static list of classes, enumerated in the left pane and a single textbox which can be used to edit the procedure (function) calls. The editor has a built-in stack trace feature. Once the call to write the generated code to disk is pressed, WMI Delphi Code Creator is ready to use. The generated code can be modified in the editor and then saved back to disk. The generated code is saved to disk as Delphi code. There are a number of options available that enable some advanced features like generating methods, classes, types, delegates, record variables, constants, object variables and events. You can also add tags to the classes, functions or events, which can be useful for enabling grouping of the classes, functions or events. There are also options to exclude certain fields of classes, functions or events. WMI Delphi Code Creator Editor Features: The editor supports the following features: -- Single Classes/Procedures - You can select any class or procedure of any class in the left pane and edit it in the editor. -- Multiple Classes/Procedures - You can select more than one class or procedure and edit them in the editor. -- Text Editor - You can change the name and parameters of the selected class or procedure. -- Properties - You can view the properties of the selected class or procedure. -- Stack Trace - You can view the methods, properties, or other properties called by the selected class or procedure. -- Options - There are several options available to further edit the selected class or procedure. See the Help button for more information. -- Save to Disk - You can save the selected class or procedure to a file. -- Option to Include/Exclude Fields/Properties - You can include and exclude certain fields/properties of a selected class or procedure. -- Option to Save Code to Disk with optional creation of Prefix File - You can save the generated code to disk without the built in prefix file and optionally create a prefix file.
