Cerebrovascular diseases (CVD) such as cerebral ischaemia, intracranial haemorrhage (ICH), and subarachnoid haemorrhage (SAH) can affect not only the brain but also the olfactory system. Olfactory dysfunction in CVD occurs in most patients and, if present, is more prominent than cognitive impairment. In addition, CVD can be accompanied by other systemic complications, such as stroke, ICH, and myocardial infarction (MI), and these systemic complications may also cause olfactory dysfunction. Several theories have been proposed to explain olfactory dysfunction in CVD; however, most previous studies only showed correlation, and no direct evidence has been provided. Therefore, olfactory dysfunction in CVD may be caused by direct damage to the olfactory system and/or by indirect mechanisms, such as secondary systemic complications. Since there is little understanding of olfactory dysfunction in CVD, further investigation of olfactory dysfunction in CVD is needed. We hope that this review will help to provide a comprehensive understanding of olfactory dysfunction in CVD. Successful second lung transplantation in a child with bronchiolitis obliterans. Import and mark-up was a mission-critical tool in AutoCAD for several decades. With today's faster and more powerful computers, its value has decreased significantly. MarkupImport and MarkupAssist have been designed to work with today's tools and workflow to bring the power and speed back to the user. Learn about: Markup Import: Print generation: Generate and display one or more PDFs of your designs, with variable presentation details (e.g., export to scale, fill, and filter). (video: 1:40 min.) Print generation provides the ability to control every aspect of your designs' print preview, with one command. Print generation can also improve your workflow by helping you organize or repurpose your CAD data. Learn about: Markup Assist: Effortless additions to your drawings. Import and add comments to your drawings and support materials, then track revisions and review user comments in real-time. (video: 1:10 min.) Markup assist automates the process of adding notes and notes to designs. The user is not constrained by predefined "note" actions, but can instead simply select existing notes or attach new ones to designs as needed. Learn about: 2-D Data Management and 1-D Curves: The new 2-D Data Management tool supports non-linear data, including coordinates, point-based data, text, and line-based data. The tool also now supports standard 1-D curves, including spline, Bezier, and BezierC, eliminating the need for plugins. Learn about: Ease of Use and Scalability: Easier to use and easier to scale: Each of the latest updates offers a more intuitive user interface and easier scalability. You can add users, edit templates, and perform nearly all updates from the new Reports tab in the ribbon. Learn about: Smart Collections: Convert a selected collection of data or drawing objects into a smart collection, making it easy to navigate or sort. You can also access a smart collection by its unique ID. Learn about: Smart Collections at a Glance: New drawing location interface: When you create a new drawing, you are now presented with a new toolbox interface. From this interface, you can drag
