What's New in the AutoCAD?

As users add new markups and revisions to a drawing, it is much faster to maintain your drawing's structure. Save time searching through your drawing history for the right revision or marking. Review your markups and revisions with a new Markup History section. Automatic markup: The Automatic Markup feature enables you to create a markup that can be embedded automatically into your drawing. Automatic Markups can be used as dynamic, responsive text, symbols, or geometric elements. Automatic markup and animations: Markup Assist creates animations based on the markup, which help users navigate the history of your drawing. It also helps users understand the rules and workflow of the Automatic Markup feature. Improved snap-to-grid: The snap-to-grid feature automatically snaps a selected object to a parallel, perpendicular, or 45° angle. Now you can enter a specific snap angle with a new option on the 2D Snapping toolbar. Documentation for Windows and Mac: A new window makes it easy to access the most current release notes, updates, and new features on your computer. New default cursor: We now have a cursor that reflects the current selection, making it easier to see what part of your drawing is selected. New circular and elliptical polyline: Draw a clean, well-defined polyline in AutoCAD by placing an arc or ellipse as the polyline's vertex. A new 2D tab called Polyline Builder makes it easy to create elliptical and circular polylines from circles and ellipses. Multi-language support: AutoCAD is available in 18 languages now, including Korean, Thai, Chinese, and Japanese. Also, you can now easily access and use the Windows and Mac AutoCAD® 2020 User Interfaces in these languages. Tagging tools: Use tagging tools to organize the contents of your drawings and to quickly find the tag you want. AutoCAD now supports both text and symbol tags, including the ability to change their properties and embed them in drawings. History of Markup and Review: AutoCAD now provides an easy way to review the history of changes made to a drawing. To begin reviewing your drawing's history, open the History of Markups window, select a markup, and view the changes made to the markup. When you are finished viewing changes,
