A: It seems like you are not having internet connectivity at the moment and the output you see is because you are using ./docker pull to download the image rather than docker pull to download it. Chemical composition, extractable bioactivity and evaluation of human safety of aerial parts of rosemary collected in Israel. The chemical composition and the total polyphenolic content of the essential oils and hydroalcoholic extracts of aerial parts of rosemary (Rosmarinus

---

officinalis L.) collected in Israel during two different seasons were analyzed by gas chromatography (GC), GC-mass spectrometry and high-performance thin-layer chromatography (HPTLC). The evaluation of the *in vitro* antioxidant activities of the extracts was done using  $\beta$ -carotene bleaching, oxygen radical absorbance capacity (ORAC) and 2,2-diphenyl-1-picrylhydrazyl (DPPH) radical scavenging methods. The human safety of the essential oils and extracts was also evaluated in an acute oral toxicity study in mice. The oil compositions of the spring and autumn samples were dominated by alpha- and beta-pinene (27.4 and 26.8%, respectively), sabinene (14.3 and 15.3%) and p-cymene (12.7 and 13.8%, respectively), followed by cuminene (10.8 and 9.7%), linalool (9.7 and 8.4%), myrcene (8.3 and 5.6%) and thymol (7.1 and 8.5%), in the respective seasons. The content of polyphenolics in the extracts was higher in autumn compared to spring seasons (24.4 and 12.5 mg GAE/g dry extract, respectively). The DPPH radical scavenging potential of the spring and autumn

---

extracts was 6.6 and 15.5  $\mu\text{mol TE/mg}$  dry extract, respectively. The antioxidant activities of the extracts were comparable to those of the essential oils. The LD50 of the essential oils and extracts was  $>12,000 \text{ mg/kg}$ . The results revealed that the essential oils and the extracts, especially from autumn samples, showed high antioxidant activity and low toxicity in mice. TNF $\alpha$  induction of tubulin tyrosine ligase requires the presence of calcineurin and NFAT. TNF $\alpha$  is a proinflammatory cytokine that induces numerous cytokines and growth factors in endothelial cells. Although a number of studies have
