I want to get the value 'crackAutoCADArchitecture2018crack' into array. A: You could do something like this: print join " ", grep /crackAutoCADArchitecture2018crack/, @array There is a foreach for that too, for example: foreach (@array) { print \$\_; } But you can do the same with grep. The present invention relates to a new and improved construction of a mouthpiece for a high pressure hose and including a bell shaped-hose mouthpiece which is secured at one of its ends via a hose connection fitting to an end of the high pressure hose, and is provided at its open end with a bell-shaped mouth formed with a fluid-tight connection or union region. A mouthpiece of the aforementioned type is known to the art, for example, as disclosed in the U.S. Pat. No. 4,436,242, granted Mar. 13, 1984 and comprises a bell-shaped-mouthpiece including a bell-shaped-mouth or opening at a free end of the mouthpiece. This bell-shaped-mouth is disposed downstream of the fluid-tight connection or union region, and such bell-shaped-mouth is provided with two fluid-tight channel-shaped depressions or slots at the open end. The one surface of the bell-shaped-mouth is embodied at least partially with an elastic sheet metal material which is highly elastic or damped in the circumferential and/or axial direction, is provided at least partially with compressible rubber material and exhibits a peripheral groove or recess extends essentially along the entire circumferential periphery of the elastic or damped sheet metal material in the region of the end of the mouthpiece in order to be able to catch or capture or pick-up the hose end. Such mouthpiece, however, possesses certain drawbacks. On the one hand, the peripheral groove along the circumferential periphery of the elastically damped sheet metal material is highly undesirable because the special deformation or deformation pattern thereof unavoidably leads to the disadvantage that there is formed at this location an alternating dent or fissure pattern which can be perceived by the person, or the
