About Golden Tiger Entertainment LLC: In the Far West, a young woman, Lana, is torn between her love of the beautiful trappings of the Empire and her deep longing to live free. She embarks on a journey through the land of the Plainsfolk and into the mountains of the Picts in search of a place where she can learn the runes and gain power to free her people from the tyranny of the Empire. Yet this is no simple journey, for Lana will have to face powerful creatures, magic and adventure if she is to find the answers she seeks. In this classic adventure game, you are her guide. Your Mission: Create your own Golden Tiger Entertainment LLC empire in the old west to turn the tide of the American Civil War. Build your cities, expand your territory, and gain military and economic might. Gather every kind of loot - precious metals, weapons and armour, potions, food, and powerful allies.

Already you know what kind of game is this one, I think you know what do you mean! * Recommended: Lord Rama Lord Rama Lord Rama is the most famous figures among the Indian mythology. After a thousand year old series of legends and myths, he is the main character of a famous mythological epic, "Ramayana". It tells us the story of the devotee of Lord Rama of being kidnapped by the evil brother of his wife (Sita) and the attempts of Lord Rama to rescue him, return her to her husband and win the fight to bring back his kingdom. It is a story of "Rama/Raghupathi" (wise Rama) king who learns the lesson of how the end of the evil is linked to the fight against evil. Started sometime in the 15th century, this huge epic, which spans over 14,000 verses written in Sanskrit, has been in vogue

embryogenesis ([@gkt011-B44]). In addition, dynamic processes, such as invagination of dorsal mesoderm ([@gkt011-B47]) and movement of centrosome in the nucleus ([@gkt011-B48]), change the nuclear shape. However, by closely examining the cytoplasmic environment in early *Drosophila* embryos, a number of bi-lobed nuclei with apparent size difference are observable ([@gkt011-B45]) ([Figure 2](#gkt011-F2){ref-type="fig"}A). Figure 2. *Drosophila* embryos divide the number of chromosome into more than 30 nuclei in nuclei. (**A**) The number of chromosome is divided into multiple according to the GC level. The circumference of each nucleus at early embryos (0--4-cell stage) is measured, and the nuclear size varies (right). Scale bar = 10 μm . (**B**) Polytene chromosome from wild-type (CG5371) line 2 of an early embryo carrying one chromosome. The chromosomes are stained with DAPI (yellow or green), with a spot (red) of homologous to *Lac oiddt1*. The arrow points to tetraploid nucleus (24x(2X:2X:4X)). The rightmost image shows a magnified nucleus, with 4 P-M (5 separate *lac oiddt1* signal) and 2 A-M (3 separate *lac oiddt1* signal) spots of four nuclei. These
