A full version of AutoCAD for the Apple Macintosh platform was released in April 1985. Autodesk acquired software developer Gilman Technology in 1994, and a version of AutoCAD running on Windows was introduced in 1998. The Draw Now command allows creation of a project or presentation on a canvas of up to 25,600 by 25,600 pixels on the screen. In some other application types, the AutoCAD interface is a separate window that overlaps the application, such as Adobe Flash, Facebook and Waze. History AutoCAD was originally developed by John Walker and Werner Conze of Computer Graphics, Inc. in the late 1970s, initially for the IBM PC. , it was still being developed by a small team of core programmers under the leadership of Ralf Baum and Ron Smith. The team has been growing over the years and now consists of several hundred programmers. On April 4, 2013, Autodesk entered into an agreement with Merced Software, Inc. (MSI) for the sale of Merced Software's Autodesk suite. In turn, MSI is now owned by Autodesk. The agreement was announced as the acquisition was set to close. Following the sale, Autodesk decided to keep the Autodesk development team separate, and is continuing to develop and release new features and products, while under the Autodesk name. Q: I accidentally found the exact value of $\sqrt{3} + \sqrt{9 + \sqrt{100 + \sqrt{1000 + \sqrt{10000 + \cdots}}}}$ and I can't figure out how to find a way to find the first n terms of the sequence. I was trying to solve this problem and got an exact value for $\sqrt{3} + \sqrt{9 + \sqrt{100 + \sqrt{1000 + \sqrt{10000 + \cdots}}}}$, but I'm having trouble finding a way to find the first n terms of the sequence. Is there any standard way to solve such a problem?

A: How's this for a start? $\sqrt{3} + \sqrt{9 + \sqrt{100 + \sqrt{1000 + \sqrt{10000 + \sqrt{100000 + \sqrt{1000000 + \cdots}}}}}}$ \approx 4.54461668446... The sum is really $\sqrt{(3 + \sqrt{100 + \sqrt{1000 + \sqrt{10000 + \sqrt{100000 + \sqrt{1000000 + \cdots}}}}})}$, but we don't need the final part of it. We can break it up like this: $\sqrt{3} + \sqrt{9 + \sqrt{100 + \sqrt{1000 + \sqrt{10000 + \sqrt{100000 + \sqrt{1000000 + \cdots}}}}}}$ $= \sqrt{\sqrt{3} + \sqrt{100 + \sqrt{1000 + \sqrt{10000 + \sqrt{100000 + \sqrt{1000000 + \cdots}}}}}}$ $+ \sqrt{9}$

Extend the ribbon/pointing tools to show attributes of any shape or block. For example, you can set a custom text style for a selected building’s footprint or change the color of a selected contour’s boundary. (video: 2:50 min.) Faster and easier creation and editing of orthographic projections. Easily rotate and move a polygon using new transformation dialogs and command palettes. New contextual help that appears in the status bar when you type a command, and other helpful hints. Provide more robust error messages when users enter invalid commands and incorrect data. You can now even turn on command completion as a help feature. Help systems and scenarios: Easily create your own scenarios, even describing how to create a scenario. Customize your scenario presentation with a new dialog. Get instant assistance when working on an existing drawing or drawing template. Simply select a drawing or a drawing template, type a command, and the system will offer the most likely command to solve your problem. Convert tabular data and attribute definitions into help text for your users. Noise Reduction: Reduce noise in all types of drawings (including those with closed or group-based elements). Improved anti-aliasing effects for all drawings: Including a new “Low Quality” anti-aliasing option. New rendering functions: “Max Bump” uses sophisticated techniques to reduce the appearance of bumps and bulges in surfaces. “Pencil” enhances smooth contours with new tools that let you combine drawing strokes and shapes for greater control. Visual Styles: Several new settings available in the Visual Styles palette (Window > Styles > Visual Styles > Visual Styles Settings). A new tabular editor for designing style guides and tabular formats.
