The user interface is simple and easy to use, and requires very little training to use. With some practice, anyone can become adept at using AutoCAD. The native features of AutoCAD can be combined with additional software programs (e.g. AutoCAD WebCenter, Paint Shop Pro and Microsoft Excel) to enhance functionality and productivity. Additional features can be found in the AutoCAD specific documentation, the product documentation and the User Guide. Measurement Text can be used to measure objects such as 2D lines and areas. Text is represented by a letter of the Latin alphabet, except for the letters 'a' and 'z'. There are a number of predefined symbols, for example "ø" for the diameter of a circle. Measurements can be set to precise values or can have units, such as feet or feet and inches. Text can be measured as a direct object (meaning the coordinate of the text can be directly measured), or as an object within a drawing area. If no measurement value is specified, the object is measured in the standard unit used by the drawing. Custom units can be created (you can create units for different lengths or different weights). You can view or change the units displayed. Units are not necessarily displayed in the same units as the measurement itself. In AutoCAD 2010, there is a dialog box to convert text to dimensional values, and vice versa. Text can be placed within rectangles or boxes. Text

The measurement and unit are converted to the selected coordinate system and placed on the screen. Other applications support the measure text command. Gimp supports the measure text command as part of the measurement tool. Photoshop supports the measure text command. Align Objects can be aligned to the current layer. AutoCAD lets you align to: Layers - Select the layer for which to align. Alignment points - The aligning points can be dragged to create a point on the layer. There are two possibilities of aligning to the point, either with vertical or horizontal lines. Horizontal - The line is parallel to the layer. Vertical - The line is perpendicular to the layer.
