Risk factors for the development of histologic chorioamnionitis in late preterm and term second twin pregnancy. To identify risk factors for histologic chorioamnionitis (HCA) in late preterm and term second twin pregnancy. This was a retrospective study of all twin gestations delivered at ≥ 34 weeks' gestation, ≥ 37 weeks' gestation, and ≥ 38 weeks' gestation (N = 125). Cases were those with histologic chorioamnionitis of their second twins, and controls were those with deliveries without chorioamnionitis (N = 574). Twin pairs were matched for multiple gestations, plurality, and zygosity. The influence of risk factors on developing HCA in late preterm and term second twin gestations was
