Call Of The Wild Season 1 720p + (S).. www.hdmoviestore.com,Q: How to determine if an element has been moved by a drag? I have an element containing children that can be moved around on a canvas. When the element is moved, I need to run a number of actions. Some of these actions don't make sense if the element has been moved via the mouse instead of the keyboard. If I detect that the element has been moved via the mouse, I will not run any of the mouse-related actions. I am using the following code:
\$(el).draggable({ ... stop: function(event, ui) { if (isDragging(el)) { mouseMoveHandler(el); } } }); The problem is, when I start dragging the element, I get the call to mouseMoveHandler() even if I release the mouse button and start dragging it with the mouse. What I want to do is tell the stop function that the element has already been moved. Is there any way to do this? A: Listen to the drag event instead. \$(el).draggable({ ... drag: function (event, ui) { c6a93da74d
