
Acer ICONIA W700 Driver For Windows 10 [2021]

like the w510, the w700 also ships with a single charging cable, and we have to say that the 2.4a charger works well: it makes it easy to charge up the tablet in a hurry, and the cable isn't too short (we're talking 2.5 feet or less). the w700 also comes with a driver cd to let you do some tweaking to get the most out of the device. this is a bit of a mixed blessing, since the drivers aren't always up to date -- we were told by acer that version 3. i did a clean install of win 10 on an acer as well and it has the same wifi issues. here's the problem i'm having. the phone connects at first. but when i try to load the phone to download the apps, the phone keeps booting out. i've made sure the phone is in the right usb port, i've tried it on a different usb port, i've tried it in bios and uefi, i've tried it on a different usb port on the computer and same problem. this happens every single time. it's not a software issue, my phone is receiving an ip address from my router and trying to load the apps. my phone has the correct firmware as well. how do you get on 8.1? did you get it before or after installing 8.1? i have the 8.1 update on my acer right now. i'm not having any issues with it at all. i still have a couple apps to update, but they are not the same as windows 8 and i don't need them. i did clean install it. i bought the acer specifically for windows 8.1 and i'm pretty happy with it. i don't like it at all. i haven't checked the battery life but it has worked fine for me. i love the size of the acer and how well it works. i would like to get it down to the size of the ipad or iphone, but i am just not interested in a tablet for the time being.

Lastly, there's the W700's price. At \$1,099, it's \$200 more expensive than the W510 and you'll get less screen area, but it does have a 32GB SSD instead of a standard hard drive. Overall, it's a win: it's a great convertible design and looks cool, and its battery life is pretty decent; but it's not for everyone, and it's not cheap. If you are looking for a convertible Windows 8 PC under \$1,200, you'll probably be better served with the 14-inch-class W510. In contrast, the W700 is a style-over-substance bit of hardware, but the fact that it's been built with tablet designs in mind more than PC is a step in the right direction. We'd like to see Acer build its own next-generation convertible chassis -- with stand functionality as an option in the first place -- but even if that happens, this will be a great little machine for some people. I've read the review for the w700 but I still haven't seen an updated review. From the review it seems like they weren't really all that impressed with the w700 or any of the other acer products. (Why am I not surprised?) Does the w7x support hdmi or does that come on with the \$999.99 price tag? You can certainly get a touchscreen Ultrabook that lasts longer than the W700, but only if it's a convertible. That's not a decision to make lightly. Acer is as much a convertibles-maker as it is a Windows tablets-maker, and Windows convertibles tend to be nice-looking, but relatively heavy, machines that run for only a few hours on a charge. No thanks. Actually, even though the W700 has a convertible cradle, you won't want it. 5ec8ef588b
