## Power Indexer Pro Reseller Edition [NO LICENSE NEEDED]

hi brent, i have two servers which is having active/passive cluster setup. i am planning to install standalone instances on this two servers only for reporting services. reporting services uses database which resides on cluster. in this scenario reporting services are running on both machines. we do have license for active/passive cluster with enterprise edition. do we need to purchase license for both nodes if we implement scale-out architecture then also do we require two licenses if you wish to use enterprise user security in oracle database enterprise edition, you no longer need to license the oracle advanced security option for kerberos and pki based authentication. it does require a corresponding oracle identity management directory services plus to be licensed. any oracle advanced security licenses purchased on or before january 31, 2004, have restricted use of the oracle internet directory (oid) component of oracle directory services plus to support enterprise user security. the power indexer pro reseller edition license allows you to create a product based on power indexer pro and add your name to the product as a reseller. this product may be added to the optional oracle support services portfolio, and it is eligible for the additional support and product enhancements. if you wish to use oracle database advanced security feature enhancements for high availability and security, oracle r enterprise business intelligence edition, and oracle r enterprise bi publisher, then you need an enterprise edition license for oracle database enterprise edition and the oracle enterprise manager application. a reduced priced license is available for oracle database standard edition.

the only way that we,  
at power bi, can  
provide you with the  
specific and exact  
solution you need is if  
we have a way to  
accurately predict  
exactly what you  
need. you don't want  
to get a product that  
doesn't provide  
exactly the solution  
you need, and that's  
why a products like  
power bi and power  
query is so critical to  
power bi's success.

---

the intent of power bi and power query is to allow you to solve whatever problem you have, without being restricted by the number of editions you can purchase. esri enterprise edition licensing is used for map and gis software, arcgis enterprise is for desktop gis solutions, and mapinfo premier is for large scale data servers and connectivity software. esri licenses are

---

available through the esri store in the usa for select customers on a subscription basis; licenses for non-us customers are available on a perpetual license basis. as of 2018, there is no cost for esri software anymore. arcgis desktop users can now gain access to the arcgis server product for free at <https://server.arcgisonline.com>. for the server versions of sql, oracle database allows you

---

to install a maximum of three (3) instances of the client software on a single computer system. instances may be on the same computer or on different computers but must be separate physical entities. if you exceed this number, you will have to license a separate client license for each instance. a "client license" is needed for each client software on the computer system. for example, a four-instance

---

database server  
would require four  
client licenses. oracle  
is the leading  
provider of database  
management systems  
(dbms). its flagship  
product is oracle  
database, which is a  
relational database  
management system  
that provides an acid-  
compliant,  
transactional data  
management system.  
it is a widely used  
database that can  
handle millions of  
rows of data.
