A good example is the Smoother tool that can be used to smooth along color gradients that are invisible in the original image. Use Control+scroll to enter into the panel. A Controls Panel (Shortcut: C) also exists. It offers more fine-tuning possibilities and is mostly for the fancy-shmancy what's for all the finesse-shmancy. A Set Panel (Shortcut: S) plus the Image Batch Menu (Express Tools Panel Shortcut: N) provide further fine-tuning. Adjustments Shift+Ctrl+S offers the same granular control with a ton of options. A Filter Panel (Shortcut: F) offers even more functions, and also a Secondary Panels Panel (Shortcut: P) that allows the download of additional adjustment presets. The Filter Panel is a very powerful adjustment tool. There is a whole section for Curves adjustments, which now have even more functions with sliders. Three sets of Paths are at hand. A to Paths (Shortcut: Shift+Ctrl+P) do exactly what you'd expect. The erase tool can be used to draw and erase, similar to Illustrator. Another tool, the Free Transform or Transform is very powerful but also very dangerous. Turn it on by pressing the Image/Paths/Free Transform button on the toolbar, and you get some options in the dialog. Furthermore, there is a lone Selection tool. It works surprisingly well, especially when you select the Correct or Reverse settings so that you get the correct selection of the content you selected. The items you can drag can be withdrawn individually, or the whole group at once.
