One new feature in Photoshop CS8 allows you to use a second monitor as a spot for viewing your image–layer and content–while working in Photoshop. You can minimize the original Photoshop window to a desktop frame that is visible in your

second monitor, if you wish. Or you can turn the secondary monitor into a conventional monitor, where you can work with Photoshop. Pixel-level editing can be done on the secondary monitor while also working on the original in Photoshop. Sure to be a big hit for users, Photoshop CS8 adds multiple selections, which are useful for grouping objects together and performing actions on that group. For example, you can remove duplicate objects from a layer using one marquee selection box, or apply a filter to an image without altering the file itself. Photoshop CS6 introduced the ability to set a brush sketch with a single click. Photoshop CS8 has tools to remove elements of a sketch, and to convert those elements into regular drawing tools. Photoshop CS7 has a wonderful new feature called Adjustment Layers. Adjustment Layers are sets of settings you can use to make improvements to your photo without affecting the original content. In many cases, Adjustment Layers are-with the proper settings-better ways to make image-editing corrections than other Photoshop methods. The Photoshop 2018 update also introduced significantly improved camera application to the program. You can now import images into Photoshop using the camera's RAW format. The app supports third-party hardware/software RAW converters, such as the Blackmagic RAW Converter and Lightroom.
