All the installation process requires is the knowledge of "Quick and Easy" process as we can see. It is clear that the application is very simple. It makes use of "Foobar" or "Foo" to create a single-click installation. If you are familiar with Microsoft's "Add/Remove programs", then you can easily follow the installation instructions. Foobar may not create a successful single-click installation if you are not familiar with that program. For example, for whatever reason the application would crash. This is not a big issue. Just click to close it, if it happens. If you don't want to install the application, you can delete it from the program's

folder. In case, you do not have Foobar, then you can download it from here. You can run KB946771 without having to worry about the compatibility of the application. But I keep downloading it more and more, as I find it useful. There are a few things

that are annoying though. One, that it will allow a program to automatically download and install. I don't want it to do that. Two, that I have to have it start on boot up. I don't want it to do that either. Three, that I have to have it start every time I go online. I don't want it to do that either. Four, I have to have it start each time I close the lid of the computer. I don't want it to do that either. Five, that it thinks it is the best way to backup my documents. I don't want it to do that either. Six, that I have to have it install itself in the system tray. I don't want that. Seven, that I have to have it start every time I want to do anything. I don't want that either. Eight, that I have to have it stay there in the system tray and never be moved. I don't want that either. Nine, that it gets bigger and bigger and bigger and requires more and more

and more disk space. I don't want that either. Ten, that I have to have it to have a close button on the window. I don't want that either. So there you go. There are so many other reasons not to like this thing. I just don't like it. I don't use it, and I don't think that anyone who uses it can find anything good about it. I like my task bar a lot better. I like my task bar better. Welcome to the official website of the Program You Will Download, ETC:Tools.
