KeyMacro Name: "Name" Macro Type: " 2edc1e01e8"

## Net Alive Registration Code Download

NetAlive is a simple utility which allows users to 'listen' on a port and talk to another PC on the same subnet which is running NetAlive. It works by using a basic TCP/IP implementation. The user's PC will act as the 'listening PC', this is called an 'Listener' and the connected PC is called the 'Listener/Talker'. When someone tries to connect to your port, NetAlive will 'listen' on that port for incoming connections. Any connections received are stored by NetAlive and a corresponding connection will be made with the connected PC. The connected PC can then send the data back to NetAlive which will be stored and send it back to the Listener/Talker. This is a very simple application, but does allow for fast communication of data. How-To videos for most features are included with the download. To activate the videos, go to Options > Options > General and click on the checkbox beside 'Enable Video Support' Doesn't work? First ensure the 'Run in background' box is unchecked. If this doesn't help, go to Options > Options > General and ensure you have the 'Enable Windows Service' box checked under the 'Windows services' tab. Version 1.00 - 10/16/2012  
V0.99 - 01/12/2012 V0.98 - 12/30/2011 V0.97 - 11/07/2011 V0.96 - 11/03/2011 V0.95 - 10/31/2011
