The new features are great, but I think the biggest change is that you need to go from Photoshop CC to Photoshop CC 2019 for the new features to work. The way Photoshop CC handles layer groups, which has always forced you to go to 2019 for true grouping, is still a good thing; it means that even if you are happy with your CC layout, you can make the leap to the new design with fewer frustrating tweaks. The new fonts and tools also work better in CC 2019, and change a few behaviors, such as the new keyboard shortcuts, that you'll really notice. Though they are improved, the new presets are designed for people who have to work in Adobe's creative cloud, not extremely appreciative users of Photoshop, who can tweak the default settings. My most noticeable problem with this update is its resistance to normal use. Adobe's new Photoshop 2019 is a streamlined, but value-packed improvement over traditional CS6. You get more for your money, but most of what you need to do will just work—which is not true of the new CC. Photographers will appreciate the new autocorrect, but there are some other problems. The most crucial is an inconsistent workflow: in the CS6 version of Photoshop, you could always choose "Open" from the file menu, which opened the file in the program you had been running last, without overwriting whatever you were working on. Photoshop CC 2019 lets you use those old file menus, but then makes it harder to work on them. File menus now use the OS, so if you're on Windows you'll still use Windows Explorer to open your files, but on a Mac you'll use Finder. This makes it much harder to work in an organized workflow for multiple images.
