Admittedly, when I first saw what I thought was a fish shaped logo in the title of the new release, I thought Photoshop was going to suddenly need a serious overhaul. Lots of things have changed between Lightroom 4 and 5. I was a little skeptical about the tool, but I have come to realize that it is a great and indispensable tool. Admittedly, it is a little buggy, and in, and when it crashes and you lose your data, you are hit with a sting that makes you think about the decision of upgrading. I've had more than a passing interest in photography for over 25 years. I'll admit straight away that I've always been a little uncomfortable with Lightroom but I have always been diligent about updating my software. When I saw Lightroom 5 I was very disappointed. All the information I was given was that it was a bit of a f****ing mess. But, a fire rages in me and I had to get my hands on it and take this huge risk. Again, I have learnt to be happy with my computer program. I can now actually do the work I want to do and I am very happy. When you create a new layer in Photoshop, you are creating a new blank layer with views into all other parts of the image. Each original image is divided into sections called *regions.* When you create a new layer, it is connected to only one region and the other regions are not affected. In other words, you can create your own layers using any smaller parts of an image or separate images. The Levels tool is a handy Photoshop feature that can be used to adjust the brightness of a photo. This tool can be used efficiently to adjust the overall brightness or the shadows or highlights of a picture. The Shake filter alters the perspective of an image.
